DATE MAILED: 02/17/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/052,256

Applicant(s)

TERUUCHI ET AL.

Examiner

Chau Nguyen

Art Unit

2176

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 29 November 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

DETAILED ACTION

1. Amendment, received on 11/29/2005, has been entered. Claims 1-20 are pending.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-20 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claims 1, 5, and 10 contain subject matter "generating a file signature code by encrypting said document as a whole" and "concatenating the generated file signature code and the electronic signatures generated from each of said structural element" which were not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1, 3-5, and 7-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fischer, European Patent Application No. 0586022 A1 in view of Serret-Avila et al. (Serret-Avila), US Patent No. 6,785,815, and further in view of Serret-Avila (Serret-Avila2), US Patent Application Publication No. US 2005/0235154.

6. As to claims 1, 5 and 10, Fischer discloses an electronic signature method comprising the steps of:

analyzing a target document to generate a representation having a structure (page 20, lines 20-36: document package contains the cover letter 300, enclosed letter 302, spread sheet 304, graphics file 306);

generating electronic signatures corresponding to each structural element (page 20, lines 20-36: signature items A, C, E, and G represent the hash of the cover letter 300, enclosed letter 302, spread sheet 304, and graphics file 306, respectively); and

However, Fischer does not explicitly disclose generating a file signature code by encrypting said document as a whole and concatenating the generated file signature

code and the electronic signatures from each of the said structural element into a single signature corresponding to the structure. Serret-Avila discloses a data signal 300 (a stream of textual information) is partitioned into a sequence of data blocks or segments 304, each segment 304 having its own signature 306 (Serret-Avila, col. 11, lines 23-45 and Fig. 3). In addition, Serret-Avila discloses each data block or segment is hashed (assigned a unique key), and all the unique keys from each data block are concatenated, resulting the signature 810 (a file signature code) which is encrypted (col. 18, lines 12-34). It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the teachings of Serret-Avila and Fischer to include generating a file signature code by encrypting said document as a whole and concatenating the generated file signature code and the electronic signatures from each of the said structural element into a single signature corresponding to the structure. Serret-Avila suggests that the hash values (all unique keys) in hash concatenation are used to verify the authenticity of the corresponding blocks in the data signal, and also to control access to and use of digital/electronic data.

However, Fischer and Serret-Avila do not explicitly disclose the target document stored in a format representing a tree structure to generate the tree structure of the target document structure in a memory. Serret-Avila2 discloses a memory unit for storing a digital signature and a plurality of hash values related to the data file, the digital signature and the plurality of hash values forming a hierarchy or tree (page 3, paragraph [0019]). Since Serret-Avila2 discloses a system and method for authenticating and protecting the integrity of data streams and other data, which is similar

Art Unit: 2176

to protecting data using digital signature of Fischer and Serret-Avila, thus it would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the teachings of Serret-Avila2 and Fischer and Serret-Avila to include the target document stored in a format representing a tree structure to generate the tree structure of the target document structure in a memory. Serret-Avila2 suggests that the hierarchy culminates with a signed hash that can be used to verify the integrity of other hash values in the hierarchy, and the other hash values can be used to efficiently verify the authenticity of arbitrary portions of the content file.

7. As to claims 3, 9, 11, 19 and 20, Fischer, Serret-Avila and Serret-Avila2 disclose wherein a rate of coincidence between the target document and the target document with an electronic signature is found from a rate of structural elements having authenticated electronic signatures to the whole structure (Fischer, page 20, lines 20-36).

8. As to claims 4, 7 and 12-15, Fischer, Serret-Avila and Serret-Avila2 disclose wherein said concatenating step includes putting the generated file signature code and the generated electronic signatures in a row (Serret-Avila discloses a data signal 300 (a stream of textual information) is partitioned into a sequence of data blocks or segments 304, each segment 304 having its own signature 306 (Serret-Avila, col. 11, lines 23-45 and Fig. 3). In addition, Serret-Avila discloses each data block or segment is hashed (assigned a unique key), and all the unique keys from each data block are concatenated

Art Unit: 2176

as shown in a row of $H(B1)$, $H(B2)$, $H(B3)$,... $H(Bn)$, resulting the signature 810 (col. 18, lines 12-34). It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the teachings of Serret-Avila and Fischer to include concatenating the generated electronic signatures in a row into a single signature corresponding to the structure of the generated representation. Serret-Avila suggests that the hash values (all unique keys) in hash concatenation are used to verify the authenticity of the corresponding blocks in the data signal, and also to control access to and use of digital/electronic data).

9. As to claims 8 and 16-18, Fischer, Serret-Avila and Serret-Avila2 disclose means for analyzing the structure of the target document to verify the target document having the generated electronic signature (Fischer, page 20, lines 20-36); and

means for analyzing each of the electronic signatures of the structural elements of the target document (Fischer, page 20, lines 20-36).

10. Claims 2 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fischer, Serret-Avila, Serret-Avila2 as applied to claims 1, 3-5 and 7-20 above and further in view of Karjoth et al. (Karjoth), US Patent Application Publication No. US 2001/0034839.

11. As to claims 2 and 6, Fischer, Serret-Avila and Serret-Avila2 disclose the step of setting a level of attachment of electronic signatures to structural elements of the

document, whereby precision of reliability judgment of a document with an electronic signature can be varied depending on the level (Fischer, page 20, lines 20-36). However, Fischer, Serret-Avila and Serret-Avila2 do not explicitly disclose setting a depth code designating a level of the tree structure said electronic signature is to be generated. Karjoth discloses computing the hash component of the tree beginning at depth d and proceeding the root at depth 0 such as forming the hashes for the leaves at level d, and then the hash values at level d-1 and so on towards to root, and then the application provider AP signs the hash tree at the root node and assigns its signature (pages 4-5, paragraphs [0060]-[0064]). It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the teachings of Karjoth and Fischer, Serret-Avila and Serre-Avila2 to include setting a depth code designating a level of the tree structure in order to calculate the hash value of the tree at the root and assign a signature to the hash value of the tree.

Response to Arguments

12. Applicant's arguments with respect to claims 1-20 are substantially directed to the amended subject matter and have been considered but are moot in view of the new ground(s) of rejection. Please see the rejection above.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chau Nguyen whose telephone number is (571) 272-4092. The examiner can normally be reached on 8:30 am – 5:30 pm Mon-Fri.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Heather Herndon, can be reached on (571) 272-4136. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306. On July 15, 2005, the Central Facsimile (FAX) Number will change from 703-872-9306 to 571-273-8300.
